velocity, and net force to simulate realistic motion. A friction
model was implemented to gradually slow the ball after launch,
requiring players to carefully balance power and positioning.
Collision detection logic ensures that the ball resets upon
contact with maze walls, reinforcing precision and control.

Through this project, I gained experience implementing real-time
simulations, handling user input, and applying physics-based
calculations in a game environment. Shoot the Puck demonstrates my
ability to integrate mathematical modeling, interactive controls,
and game logic to create an engaging and responsive application.
